Instruction Manual

Manuel d'instructions

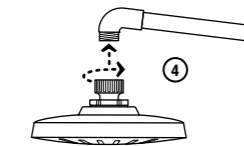

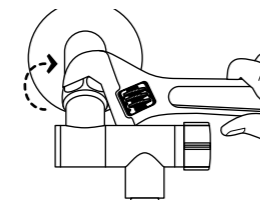

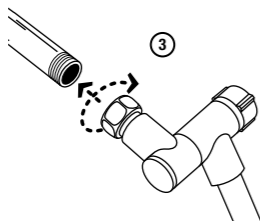

Manual de instrucciones

Model Number:

FN 20022535-F AA

INSTALLATION

1. Do not use pipe tape.
2. Before installing shower arm to J-pipe, loosen shower arm knob by turning counter-clockwise. This enables shower arm to be rotated to a downward position which allows the hex nut to be properly tightened. Once the shower arm is in the downward position re-tighten the knob by turning clockwise.
3. Install shower head to J-pipe by threading hex nut onto shower pipe. Hand tighten clockwise to a snug fit. Use an adjustable wrench to tighten hex nut to pipe until it is secure. **Do not overtighten.**

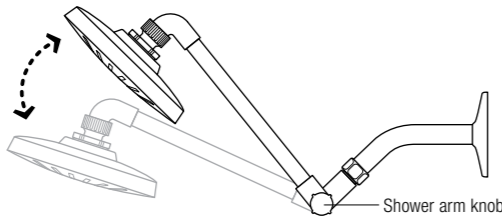

4. Install shower head to adjustable arm by threading pivot ball onto the end of the arm. Hand tighten clockwise to a snug fit.
5. Turn on water to test for leaks. Tighten connections as needed.

ADJUSTING ARM AND SHOWER HEAD POSITION

1. Slightly loosen shower arm knob ¼-½ turn. (Do not unscrew all the way.)
2. Rotate arm and head to the desired position, holding the unit in place until you re-tighten shower arm knob. Slight leaking may occur while nut is loose.

Note: If slight leaking exists at the knob when adjusting the arm angle, simply retighten the knob in the desired position to seal the connection and stop leakage.

WARNINGS:

- To avoid hot water dangers and conserve even more energy, make sure your water heater is set at 48.9°C (120°F) or below.
- Test the tub/shower water with your hand before bathing.
- Do not pull or tug on the adjustable arm. This may result in the unit coming loose or falling.
- **For external use only.** The potentially deadly amoeba, *Naegleria fowleri*, may be present in some tap water or unchlorinated well water.

TROUBLESHOOTING GUIDE

Problem	Solution
No water flow from installed shower head	a Confirm previous shower washer is not in the j-pipe. b Confirm there is only one washer in the pivot ball.
Low water force or missing spray patterns	a Clean shower head in vinegar/water solution. (See care section). b Clean filter screen.
Leaking at arm/pivot ball connection	a Confirm one single washer is seated on top of the screen. b Grate bar of soap across the j-pipe threads to act as a sealant.

CARE AND CLEANING

1. To maintain proper working conditions cleaning is required when mineral deposits appear on the spray orifices. To clean mineral deposits, gently rub the rubber anti-clog nozzles on the face of the shower head to dislodge.
2. To clean heavier deposits, remove shower head and soak face down in 1-2 cups of white vinegar (use white vinegar only) for about 2-3 hours. Replace shower head and run in each mode to flush out vinegar.
3. Clean filter screen at least once a year, or whenever you notice a drop in water force.
4. Do not clean or rinse the shower head with **any** harsh chemicals, heavy-duty cleaners, or abrasives; this may damage parts or finish and will void warranty.

LIMITED LIFETIME WARRANTY

Save your receipt as proof of purchase is required for warranty action.

Water Pik, Inc. warrants to the original purchaser of this product that it is free from defects in material and workmanship for as long as the original purchaser owns this product. Water Pik, Inc. will replace any part of the product which in our opinion is defective, provided that the product has not been abused, misused, altered or damaged after purchase. (This includes damage due to use of tools or harsh chemicals.) In the event an item has been discontinued we will replace with what we deem to be the closest product. Water Pik, Inc. is not responsible for labor charges, installation, or other consequential cost. The responsibility of Water Pik, Inc. shall not exceed the original purchase price of the product. This warranty gives you specific legal rights. You may also have other rights that vary where you reside.

FRANÇAIS

Nous vous remercions pour l'achat de cette douchette pluie battante + Waterpik®. Ce manuel vous fournira les informations nécessaires pour une installation facile et rapide. Vous pourrez très bientôt profiter d'une expérience digne du spa le plus luxueux.

Pour plus d'informations sur les douchettes Waterpik®, consultez le site Internet www.waterpik.com.

AVANT L'INSTALLATION

- Inscrive dans l'espace ci-dessus le numéro de modèle du produit (le numéro de modèle du produit figure sur l'emballage, à proximité du code barre).

Si l'emballage du produit n'est plus disponible, on peut trouver le numéro de modèle du produit sur notre site Internet www.waterpik.com.

- Regrouper les outils nécessaires à l'installation de la douchette.

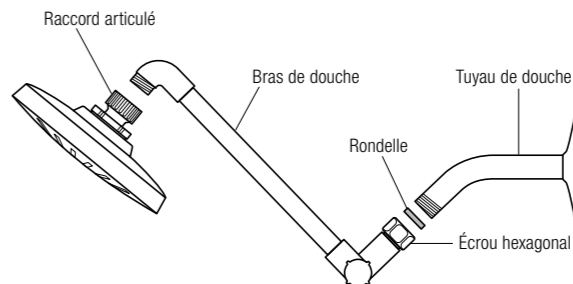

Clef à molette (pas inclus)

- Retirer la douchette existante; éliminer également les résidus de composé d'étanchéité des tuyauteries.
- Veiller à ce que le joint de la douchette existante ne reste pas attaché sur le tube d'alimentation. Utiliser un ustensile mince tel un crayon ou un tournevis pour vérifier qu'aucun joint ne se trouve à l'intérieur du tube d'alimentation. Ne pas utiliser les doigts.

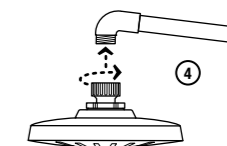

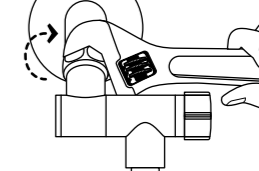

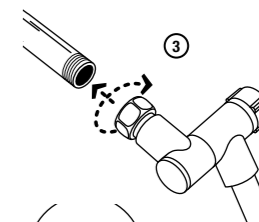

L'utilisation d'adhésif à tuyauteries n'est pas recommandée.

COMPOSANTS

INSTALLATION

1. Ne pas utiliser d'adhésif à tuyauteries.
2. Avant d'installer le bras de douche sur le tuyau en « J », desserrer l'écrou du bras de douche en le tournant dans le sens antihoraire. Cela permet de faire pivoter le bras de douche vers le bas et de serrer correctement l'écrou hexagonal. Une fois le bras de douche en position basse, resserrer l'écrou en le tournant dans le sens horaire.
3. Installer la douchette sur le tuyau en « J » en enfilaient l'écrou hexagonal sur le tuyau de douche. Serrer fermement à la main. Serrer l'écrou hexagonal sur le tuyau à l'aide d'une clé à molette jusqu'à ce qu'il soit correctement ajusté. **Ne pas serrer excessivement.**

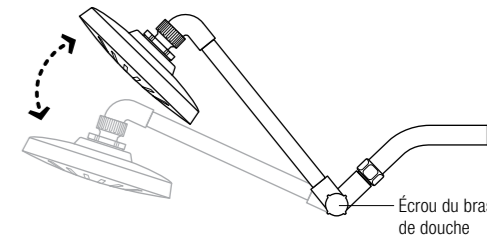

4. Installer la douchette sur le bras réglable en enfilaient le raccord articulé sur l'extrémité du bras. Serrer fermement à la main.
5. Ouvrir le robinet d'eau et inspecter pour rechercher la présence éventuelle de fuites. Resserrer les connexions si nécessaire.

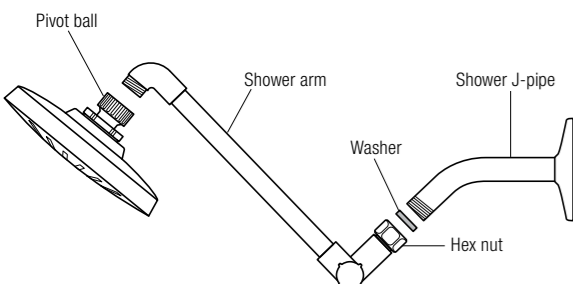

RÉGLAGE DE LA POSITION DU BRAS DE DOUCHE ET DE LA DOUCHETTE

1. Desserrer légèrement l'écrou du bras de douche de ¼ à ½ tour. (Ne pas le desserrer complètement.)
2. Faire pivoter le bras de douche jusqu'à la position souhaitée; maintenir l'appareil en place jusqu'à ce que l'on ait resserré le écrou du bras de douche. De légères fuites peuvent se produire lorsque l'écrou est desserré.

Remarque : Si l'on observe de légères fuites au niveau de l'écrou du bras de douche lorsque l'on règle l'angle du bras, il suffit de resserrer l'écrou du bras à la position désirée pour assurer l'étanchéité du raccord et arrêter la fuite.

COMPONENTS

to the pipe. Use a thin utensil to check inside the pipe for washers, such as a pencil or screw driver. **Do not use your fingers.**

Pipe tape is not recommended.

- Remove old shower head and remove all pipe tape.
- Ensure that the washer from the old shower is not connected

Adjustable Wrench (not included)

PRIOR TO INSTALLATION

- Write down your model number in the allotted space above. (Model number is found on the packaging near barcode.)

If you do not have the package you may find the model number on our website www.waterpik.com.

- Gather the tools to install the shower head.

ENGLISH

Thank you for purchasing this Waterpik® Rainfall+ shower head. This booklet gives you the information for a quick and easy installation. You are minutes away from enjoying a luxurious spa experience.
